Hi Liz,

I have reviewed the review letter from DEEP and offer the following responses

Public Access

- There is landscape area adjacent to the boat launch that can be used for public access signage. Additionally, there is a mulched area called for adjacent the fishing pier entrance for public access signage and typical DEEP fishing regulation and guideline postings.

Stormwater & Water Quality:

- The 0.06 acre increase in impervious area does not result in a cumulative adverse impact from stormwater leaving the site or downstream of the site. As noted in the drainage report the site is located near the terminus of a 921,600 acre watershed for the Thames River. The 0.06 acre increase in impervious area is negligible and will have no negative impact to the River or downstream.
- The goals of the DEEP Stormwater Quality Manual and MS4 requirements are met through the use of the water quality basin. The basin volume has been sized to meet these guidelines. The use of biofiltering parking lot islands would not be practical based on the topography of the site and the need to remove parking spaces if put into use. The stormwater from the parking area will receive biofiltration through the vegetation in the water quality basin, accomplishing the same goal as this type of LID feature.
- Sedimentation and erosion control measures and construction details are included on the project plans and shall be installed prior to construction and shall be maintained throughout construction.

Flood Management Certification and DEEP Permitting:

- CLA has been working with the Town and DEEP for their permitting requirements.
- DEEP Flood Management and Structure Dredge & Fill applications will be submitted shortly and will be acquired prior to the start of construction.
- DEEP NDDDB, DEEP Fisheries, and DEEP Aquaculture have reviewed and approved the current project plans.

Let me know if you need anything else. Thanks.
