

Coggeshall timber Harvest

This is a timber harvest plan for the property of 867 Raymond hill road oakdale ct. The goal of this harvest is to cut the low quality, unhealthy, and fully mature trees to promote growth to the residual stand and allow sunlight to reach the forest floor to promote new growth. Trees will be cut and pulled out with a log skidder down an existing skid road to the landing. Tops will be slashed down to 2 feet or less. The property is 15 acres and 14 will be harvested, boundaries have been identified and marked with pink ribbons. There will be one wetland crossing, corduroy and timber matts will be used to cross. This harvest will take 2-3 weeks to complete.

Thanks
Brian Silk
