Re: Wetland delineation, 145 Moxley Road, Montville, CT.

Dear Mr. Deschamps,

At your request I have delineated the inland wetlands/watercourse on the subject property.

These wetlands have been delineated in accordance with the standards of the National Cooperative Soil Survey and the definitions of wetlands and watercourses as found in the Connecticut Statutes, Chapter 440, Section 22A-38.

Fluorescent pink flags with a corresponding location number delineate the boundaries of these inland wetlands and the adjacent upland soils.

Wetland flags WF- 1 through WF- 24 delineate the boundary of a palustrine scrub-shrub wetland/watercourse found in the western portion of the property.

Water stained leaves found in portions of the wetland indicate that it is inundated for prolonged periods, although it was dry on the date of the delineation, (4/19/23).

These wetland soils have formed from the persistent wetness due to the high seasonal water tables and groundwater breakout. They are characterized by shallow redoximorphic features and low chroma colors within 20 inches of the soil surface.

In conclusion, if you have any questions concerning the delineation or this report, please feel free to contact me.

Thank you,

Joseph R. Theroux
