Good Afternoon Stacy,

I have completed a review of CLA's response with respect to the offered wetland mitigation and permitting impacts for the additional emergency access into Montville. Acknowledging there is no anticipated loss in wetland function due to the proposed activities, it is my professional opinion CLA has adequately addressed impacts by providing assurances of the plantings survivability for 2 years following installation for the 37 shrubs, which have also been increased in size to 3-4 tall shrubs which will provide better vigor and increase survivability.

The applicant also acknowledges for the record the project will not be segmented or phased regardless of municipal boundaries. I have no further comments at this time but would be happy to address any concerns or questions the Commission may have. Thanks for following up.

Best regards,

Ian Cole, PWS/ SOIL SCIENTIST
