

129 Simpson Lane Shed Relocation Plan

Location 1: At location 1 there currently sits a 14' x 10' newly constructed shed on a leveled bed of crushed stone. I'd like to move this shed to the back yard in anticipation of replacing it with a larger structure.

Location 2: Represents the location in the back yard (within wetland designated ground) to which I'd like to place a bed of crushed stone to accommodate and move the shed currently at location 1.

Location 3: At location 3 is a 12' x 12' shed that's been there since we purchased the property. It currently occupies space within designated wetlands. This shed is in a state of disrepair and so my proposal is to take down and completely remove this shed, thus restoring 144 sq ft of wetlands...in exchange for occupying a different 140 sq ft of wetlands behind the house in a much more level and convenient location for a shed.
